Question 1. 10pts

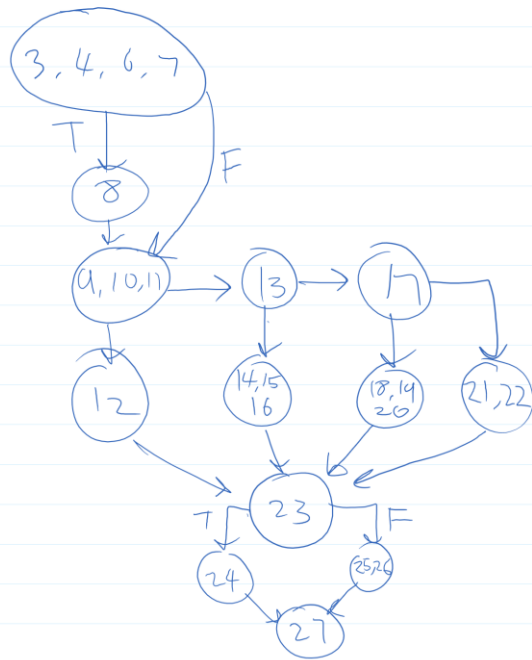

- a) $x = []$
- b) $x = [3]$
- c) $x = [1, 3, 5, 7]$
- d) $x = [-10, -9, 0, 99, 100]$
 $l = 1$
 $\text{cnt} = 1$
PC = second iteration after $\text{cnt} = \text{cnt} + 1$

Question 2. 10pts

- a)
- ```
1 class ForStmt(Stmt):
2 def __init__(self, var, aexp_i, aexp_j, stmt):
3 self.var = var
4 self.aexp_i = aexp_i
5 self.aexp_j = aexp_j
6 self.stmt = stmt
```

- b)
- |                                                                                                                                           |                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $\frac{\langle x \leq j, q \rangle \downarrow \text{false}}{\langle \text{for } x=i \text{ to } j \text{ do } S, q \rangle \downarrow q}$ | $\frac{\langle x \leq j, q \rangle \downarrow \text{true} \quad \langle S; \text{for } x=i \text{ to } j \text{ do } S, q \rangle \downarrow q'}{\langle \text{for } x=i \text{ to } j \text{ do } S, q \rangle \downarrow q'}$ |
|-------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Question 3. 20pts

- a)
- b)

**Question 4. 30pts**
